# HOT STUFF

We bring you a mix of the most innovative and helpful products on the market today...

**FORBRAIN**<sup>®</sup>

## Forbrain

The Forbrain is a headset that can help improve skills such as speech, listening, communication and concentration.

You place the headset round the back of your head with the ear pieces sitting on the two bones beside your outer ears and adjust the microphone to your mouth so you can easily hear your voice clearly. When you speak into the microphone you hear your voice through vibrations in your facial bones, not through your ear passages as you would think, much like if you put your fingers in your ears and begin to speak.

By speaking aloud with the Forbrain for just a few minutes a day, Forbrain can help to

improve the quality of your voice, as well as your ability to listen carefully and communicate better. This can have a positive impact at work, home and school in areas such as reading and writing, verbal or short-term memory, attention and ability to stay on task, concentration and focus and speech, pronunciation and fluency.

The Forbrain can have benefits for users with autism, ADD and a range of learning and communication difficulties. On the Forbrain website you can read a number of testimonials from users, parents and therapists of users who have seen a range of benefits from using the product.
